Security Master

Qudol Security Master is now available as managed cloud, private cloud, or on-prem deployments.

Qudol

No More Data Wrangling

Qudol links multiple records, time periods, and vendor identifiers as a single security, and assigns it a unique identifier (QUID). All data, history, and logic is linked through the QUID, allowing for powerful, historical analytics.

As Of: 2015-02-06					
QUID*	MSCI	FTSE	Barra	HOLT	Russ
AGRI BANK OF CN 32011375360	071C365E		F8D42C54	08B90A87

TRIPLE POINT SO					

* Identifiers have been obfuscated for compliance.

Unlimited History

Security Master maps each security in your universe to a single primary asset from each of your data vendors using the QUID.

Each QUID is a linking time-series identifier with unlimited deep history, enabling powerful analytics.

Data-as-a-Service

Qudol's refined data is readily available in easy-to-read, de-normalized tables through on-demand APIs. Deploy rapidly with minimal impact to your existing systems and operations.

Case Study:
Alphabet Share-Classes

In the sample table, the same HOLT asset is linked to both share-classes for Alphabet. Qudol disentangles this small but crucial difference with distinct QUID mappings.

"While we explored a number of options for how to clean and manage multiple data sets from dozens of different sources, Qudol offered a solution no other vendor had: the ability to pull in the historical data our portfolio managers rely on to make the best investment decisions."

Investment Data Manager, U.S. Public Pension

Qudol has over 25 years of successful partnerships with asset management teams. To book a demo and learn more about how Security Master can simplify your data operations, send us a message at info@securitymaster.com.
